.NET App Dev Hands-On Lab

Razor Pages 2b – Configuration for Commons Services

Before starting this lab, you must have completed Razor Pages Lab 2a. This lab work is in the `AutoLot.Web` project.

Step 1: Update the Root AppSettings.json file

- Update the `appsettings.json` in the `AutoLot.Web` project to the following:

```
{
  "AllowedHosts": "*"
}
```

Step 2: Update the Development App Settings

- Update the `appsettings.Development.json` in the `AutoLot.Web` project to the following:

```
{
  "AppLoggingSettings": {
    "MSSqlServer": {
      "TableName": "SeriLogs",
      "Schema": "Logging",
      "ConnectionStringName": "AutoLot"
    },
    "File": {
      "Drive": "c",
      "FilePath": "temp",
      "FileName": "log_AutoLot_Development.txt"
    },
    "General": {
      "RestrictedToMinimumLevel": "Information"
    }
  },
  "AppName": "AutoLot.Web - Dev"
}
```

Step 3: Add and Update the Production App Settings File

- Add a new JSON file to the `AutoLot.Web` project named `appsettings.Production.json` and update the file to the following:

```json
{
  "AppLoggingSettings": {
    "MSSqlServer": {
      "TableName": "SeriLogs",
      "Schema": "Logging",
      "ConnectionStringName": "AutoLot"
    },
    "File": {
      "Drive": "c",
      "FilePath": "temp",
      "FileName": "log_AutoLot.txt"
    },
    "General": {
      "RestrictedToMinimumLevel": "Error"
    }
  },
  "AppName": "AutoLot.Web"
}
```

Summary

This lab updates the settings to support the services.

Next steps

In the next part of this tutorial series, you will start working with ASP.NET Core.
